                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                               The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic meterial obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRKAG3 polymorphic variant DNA (PRKAG3-200).
                                                                                                                           Screening animals to determine those likely to produce larger litters and improved meat quality traits involves assaying for the presence of polymorphisms in the AMP activated protein kinase regulatory gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCAGAAAGAATCCGTGGGAAACGGAGGGCCAAAGCCTTGAGATGGACAAGGCAGAAGTCG

The present sequence is a cDNA encoding pig adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3. Prkag3 gene is located in the RN locus of chromosome 15.

Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as that as myopathy and cardiovascular diseases, to modulate metabolism activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3.

Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for encoding PRKAG3 is useful for detecting mutations in a PrkaG3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain compounds and is useful in gene therapy.
                         Pig; gamma subunit; adenosine monophosphate-activated kinase; AMPK; PRKAG3; diabetes; obesity; myopathy; cardiovascular disease; anorectic; genetic testing; carbohydrate metabolism disorder; skeletal muscle; cystathione beta synthase; CBS; cardiant; gene therapy; RN locus; chromosome 15; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA0825-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides of the invention have homology to known proteins, thereby polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have arrious activities; including optoxine cell proliferation activities; including optoxine cell proliferation activities; including optoxine cell proliferation activities; activit cativity; issue growth activity; hamantopolesis required activities; hamantopolesis required activities; nemetor or inhibin-related activities; chemologica activities; activit activities; activit activities; preseptor or ligand activities; on may be involved in oncogenesis, cancer cell proliferation or metastasis.

CC immunomodulatory activity activit or second activities; on may be involved in oncogenesis, cancer cell proliferation or metastasis.

CC conditions, e.g., by protein or gene therapy. Such conditions include cancers, hematopoletic disorders (e.g., asthma or arthritis), conditions, e.g., by protein or gene therapy. Such conditions include cancers, hematopoletic disorders (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arthrial ischemania, bone disorders (e.g., asthma or arthritis), creptic (creptic or nucleic acids encoding them) may be used to promote wound inaunomodulatory activities may be used in the treatment of viral, barchials with growth. Por example, such polypeptides may be used to augment or replace cells demaged by illness, and in diagnosis of the above conditions, and in drugal indections and accidental damage. The co

                                                                                                                                                                                             Human; AMP-activated protein kinase gamma 3 subunit; PRKAG3; variant;
The sequences given in AAH43681-84 represents genomic fragments encoding the human AMP-activated protein kinase gamma 3 subunit (PRKAG3). Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of

a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. There may also be nucleotide variation
                                                                                                                                                                                                                                                                                                                                                                                                                             540 AGGTCCCCGGTCCAGGCCAGCTGCTGAGTCCACCGGGCTGGAGGCCACATTCCCCAAGAC

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by Chi Achip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated CG, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent capable of modulating GCA or an inflammation (especially for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a chronic) in a tissue, an allergic response in a subject, exposure of a chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the chronic) in a tissue, an inflammation of the issue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation, an inflammation of the issue of gene(s) from Gs in the tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from Gs in the tissue, M is useful for detecting at issue having GCA; M2 is useful for Getecting an inflammation in a tissue, M is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation expension of pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation exposures a subject to a pathogen or sterile inflammation exposure of a subject to a pathogen or sterile inflammation exposure of a subject to 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome,

XX

New nucleic acid that is a pancreatic cancer antigen for preventing, proventing, or ameliorating a medical condition, particular pancreatic accept.

PT treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition.

SS claim 1; Page 498-499; 1379pp; English.

XX

AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to proteins, called pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, contraceptive, nootropic, immunomodulatory, relaxant, contraceptive, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, contraceptive, and antigent and antidition or in assays contraceptive, indian partners to the proteins and the activity of the proteins and the activity of the proteins and the activity of the proteins and the activity of the proteins can be used to design nucleic detect, treat or prevent pancreatic disorders, especially cancer.

Got diagnostic machage pathological conditions and the activity of for pancreatic cancer antigens can be used to design nucleic carcin probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to treat on provent neural, immune system, muscular, correctins can be used to treat or prevent neural, immune system, muscular, correctins can be used to treat or prevent neural, immune system, correction, and in vitro diagnostic and therapeutic methods. The proteins can be used to prevent neural, immune system, corrections and the present invention.

Corrections are seed in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                 US-09-826-581-5

//Losse_Vptc_riscond
was primed with a Not1-oligo(dT) primer. Five prime end
enriched, double-stranded cDNA was digested with Not I and
cloned into the Not I and Eco RV sites of the pCNVSPORT 6
vector. Library was normalized. Library was constructed by
